

PRODUCT SHEET

The Sage logo is displayed in a bright green, lowercase, sans-serif font.The Sage X3 logo features the letters 'X3' in a large, light grey, serif font.

Electronic signature

The Sage logo is displayed in a bright green, lowercase, sans-serif font.

Transaction safety against change

Improves the safety of sales transactions and journal entries

Electronic signature

Sage X3 leverages the electronic signature mechanism to improve the safety of sales transactions and journal entries. It will provide the ability to detect fraudulent changes that have been done either via specific scripts or direct connection to the database.

Critical fields are concatenated, hashed and encrypted using highly secured algorithms based on public/private keys. The result is an unfalsifiable signature.

Electronic signature may be triggered on Sales and AR invoices, and or Journal entries, at the posting and or validation of these documents

The electronic signature has been designed and delivered to meet French requirements and could be extended with minimum effort to other geographies.

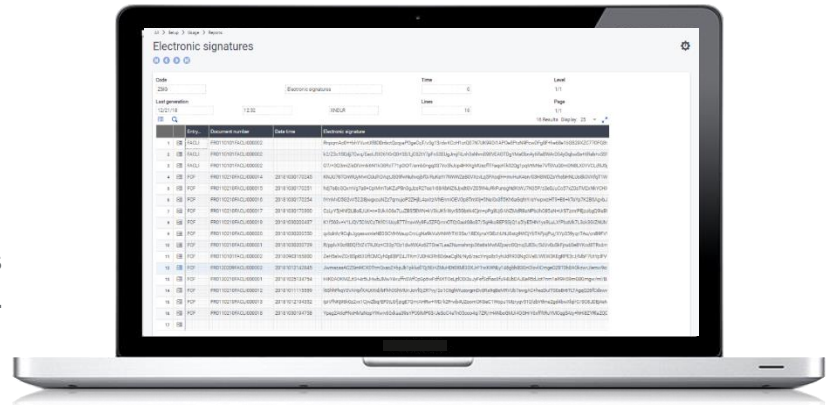

The French requirement has driven the set of the data to be taken in account in the build of the signature for invoices, data related to tax management, journal entries, mandatory data required in the "FEC"-the tax audit file required by the French law.

Key benefits for your business:

- Increased safety of sales invoices and journal entry
- Detection of fraudulent changes, whatever they have been made
- Better comply with local legal requirements and standards.

Key Features

- Ability to trigger electronic signatures, at the company level
- Ability to trigger independent electronic signatures for Sales/AR invoices or/and journal entries
- Data is concatenated, hashed and encrypted to meet requirements as specified by the French authorities.

Electronic signature on customer invoices and journal entries is available with Sage X3 version 12 and has been backported in version v6, v7, u8,u9 and v11.
