MightySat® Rx
Fingertip Pulse Oximeter

en

OPERATOR'S MANUAL

Not For Sale in the USA - For Export Only

These instructions provide information for proper operation of all models of the MightySat® Rx Fingertip Pulse Oximeter. There may be information provided in this manual that is not relevant to your device model. General knowledge of pulse oximetry and an understanding of the basic functions of MightySat Rx are prerequisites for its proper use. Do not operate MightySat Rx without completely reading and understanding these instructions.

Notice: Purchase or possession of this device does not carry any express or implied license to use with replacement parts which would, alone or in combination with this device, fall within the scope of one of the relating patents.

CAUTION: Use of this device in a manner other than follow the intended use may cause personal injury.

Note: Cleaned One Only: The device and related accessories have obtained CE Mark for noninvasive patient monitoring. It should not be used for any purposes, procedures, experiments or uses other than for which the device is not intended or cleared by the applicable regulatory authorities, or in any manner inconsistent with the instructions for use or labeling. **Contraindications, warnings, cautions and notes: All preceding information, including indications, contraindications, warnings, and cautions, are necessary.**

ABOUT THIS MANUAL

Do not operate the MightySat® Rx Fingertip Pulse Oximeter without completely reading and understanding the instructions.

Always use the MightySat Rx precisely in accordance with the directions in this manual, including site selection and sensor placement. Failure to follow all of the directions in this manual could lead to inaccurate measurements.

Read and follow any warnings, cautions, and notes presented throughout this manual. The following are explanations of warnings, cautions, and notes:

A warning is given when actions may result in a serious outcome to the patient or user (for example, injury, serious adverse effect, or death).

WARNING: This is an example of a warning statement.

A caution is given when any special care is to be exercised by the patient or user to avoid injury to the patient, damage to the instrument, or damage to other property.

CAUTION: This is an example of a caution statement.

A note is given when additional general information is applicable.

Note: This is an example of a note.

PRODUCT DESCRIPTION AND INDICATIONS

Product Description

The MightySat® Fingertip Pulse Oximeter is intended as a noninvasive device that measures and displays functional oxygen saturation (SpO2), Pulse Rate (PR), Perfusion Index (PI), optional Pulse Variability Index (PVI®), and optional Respiration Rate from the Pleth Signal (RRp). MightySat Rx is suitable for people who require spot-check or continuous monitoring.

The following key features are available for the MightySat Rx:

- Bluetooth® wireless technology for wireless transmission to monitor and low perfusion environments
- Optional Bluetooth® 1.2 wireless technology for the wireless transfer of patient data to smart devices.

The MightySat® Fingertip Pulse Oximeter is available in the following models:

PRODUCT VERSIONS	FEATURES
MightySat Rx	Intended to measure and display functional oxygen saturation (SpO2), Pulse Rate (PR), and Perfusion Index (PI).
MightySat Rx, Bluetooth LE	Intended to measure and display functional oxygen saturation (SpO2), Pulse Rate (PR), and Perfusion Index (PI). Optional Bluetooth LE radio is intended to transfer of parameter data to a compatible smart device.
MightySat Rx, Bluetooth LE, PVI®	Intended to measure and display functional oxygen saturation (SpO2), Pulse Rate (PR), Perfusion Index (PI), optional Pleth Variability Index (PVI®), and optional Respiration Rate from the Pleth (RRp). Optional Bluetooth LE radio is intended for transfer of parameter data to a compatible smart device.

Indications for Use

The MightySat® Rx Fingertip Pulse Oximeter is indicated for the noninvasive spot checking of functional oxygen saturation of arterial hemoglobin (SpO2), pulse rate (PR), and respiration rate from the pleth (RRp). The Masimo MightySat Rx Fingertip Pulse Oximeter is indicated for use with adult and pediatric patients during both no motion and motion conditions, and for patients who are well or poorly perfused in hospitals, hospital-type facilities, mobile, and home environments.

SAFETY INFORMATION, WARNINGS, AND CAUTIONS

Safety Warnings and Cautions

- **WARNING:** Do not use MightySat Rx during magnetic resonance imaging (MRI) or in an MRI environment.
- **WARNING:** Do not place MightySat Rx or accessories in any position that might cause it to fall on the patient.
- **WARNING:** Do not use MightySat Rx during defibrillation.
- **WARNING:** Do not use MightySat Rx during electrosurgery.
- **WARNING:** Do not use MightySat Rx in the presence of flammable anesthetics or other flammable substances, oxygen-enriched environments, or vicinity susceptible to avoid the risk of explosion.
- **WARNING:** Only use MightySat Rx to secure it to the finger. Excessive pressure to a finger can cause skin damage.
- **WARNING:** Check the sensor site every hour to ensure adequate circulation, skin integrity, and sensor alignment. Skin damage, pressure necrosis, or inaccurate readings may result.
- **WARNING:** Do not leave the MightySat Rx unattended around children. Small items such as the battery door, battery, and lanyard may be choking hazards.
- **WARNING:** Do not use the lanyard during activities where it may become wrapped around the neck. Strangulation may occur.
- **CAUTION:** Do not use MightySat Rx near devices that are sensitive to magnets. The magnet provided with the MightySat Rx could interfere with the proper operation of the device.
- **Note:** The minimum low saturation temperature is measured to be less than 47°C (116°F) in a 35°C (95°F) environment. The device will not exceed 43°C (109°F) measuring the skin interface temperature with MightySat Rx operating under reasonable worst-case conditions.

Performance Warnings and Cautions

- **WARNING:** MightySat Rx is not an apnea monitor and should not be used for arrhythmia analysis.
- **WARNING:** MightySat Rx should not be used as the sole basis for medical decisions. It must be used in conjunction with clinical signs and symptoms.
- **WARNING:** Do not use MightySat Rx for continuous monitoring. It is intended for spot-check use only. No alarms are provided to support continuous monitoring.
- **WARNING:** Do not use MightySat Rx if it appears or is suspected to be damaged. Damage to internal parts can result in no or inaccurate readings.
- **WARNING:** Do not repair, open, or modify MightySat Rx. Damage to internal parts can result in no or inaccurate readings.
- **WARNING:** Do not use MightySat Rx if the internal parts have been exposed to liquids. Damage to the internal parts may result in no or inaccurate readings.
- **WARNING:** SpO2 is empirically calibrated in healthy adult volunteers with normal levels of carboxyhemoglobin (COHb) and methemoglobin (MetHb).
- **WARNING:** Avoid the following conditions to minimize the risk of inaccurate SpO2 readings:
  - Improper MightySat Rx placement or alignment
  - Elevated levels of COHb and MetHb. High levels of COHb or MetHb may occur with a seemingly normal SpO2. When elevated levels of COHb or MetHb are suspected, laboratory analysis (CO-Oximetry) of a blood sample is recommended.
  - Intravascular dyes such as indocyanine green or methylene blue
  - Externally applied coloring and texture such as nail polish, acrylic nails, glitter, etc.
  - Patients attached to a high-pressure cuff
  - Placing the MightySat Rx sensor on any extremity with an arterial catheter or blood pressure cuff
  - Elevated levels of bilirubin
  - Severe anemia
  - Venous congestion
  - Venous pulsation
  - Extremely low arterial perfusion
  - Excessive motion
- **WARNING:** Inaccurate Respiration Rate (RRp) measurements may be caused by: improper MightySat Rx placement or alignment, low arterial perfusion, excessive motion, or during arrhythmia.
- **CAUTION:** Properly apply and avoid using the MightySat Rx under high ambient light sources, fluorescent lights, infrared heating lamps and direct sunlight to minimize interference that may result in no or inaccurate readings.
- **CAUTION:** Allow the MightySat Rx to warm from electrical equipment that emits radio frequencies to minimize such interference. Radio interference may result in no or inaccurate readings.
- **CAUTION:** When using MightySat Rx together with a smart device, keep both devices within the recommended range of each other (see Specifications for details); moving outside of this range may cause a loss in connection with the smart device.
- **CAUTION:** When using MightySat Rx (optional Bluetooth version) with a smart device, relocate the devices away from sources that may interfere with the Bluetooth connection. The presence of other devices that may create radio frequency interference (RF) may result in loss of Quality of Service (see Specifications for details) of the Bluetooth connection. Devices that may cause RFI include but are not limited to the following: electrocautery equipment, diathermy equipment, other cellular telephones, wireless PC and tablets, pagers, RFID devices, RFID devices, and electromagnetic security systems.
- **CAUTION:** Do not attempt to remanufacture, recondition, or recycle MightySat Rx as these processes may damage the internal parts. Damage to internal parts can result in no or inaccurate readings.
- **Note:** The MightySat Rx display may be difficult to view when exposed to direct sunlight or bright lights.
- **Note:** In the event severe the accuracy of the MightySat Rx may be compromised. A functional tester should only be used to check if a unit is working properly.
- **Note:** The MightySat Rx display will automatically if there are no readings.

Cleaning, Disinfecting, and Service Warnings and Cautions

- **WARNING:** Properly use and dispose of Alkaline batteries as they may leak or explode.
- **WARNING:** Remove alkaline batteries when the MightySat Rx will not be in use for more than 30 days to avoid damage to the device due to battery leakage that may leak.
- **WARNING:** Replace both batteries at the same time to avoid mixing fully and partially charged batteries. These actions may cause the batteries to leak, resulting in possible damage to the device.
- **CAUTION:** Use only AAA alkaline batteries. Use of non-alkaline batteries may affect the accuracy of the battery status indicator.
- **CAUTION:** Only perform maintenance procedures specifically described in the manual; otherwise, return MightySat Rx for servicing. Improper maintenance may result in damage to the device and injury to patients. There are no user serviceable parts inside.
- **CAUTION:** Do not clean MightySat Rx with any chemical other than those specified in the Cleaning, Disinfecting and Service section. These substances may affect the device's materials and damage internal parts.
- **CAUTION:** Do not submerge MightySat Rx in any cleaning solution or immerse it in order to avoid damage, irradiation, clean, gas, ethylene oxide or any other method. This will seriously damage the device.
- **CAUTION:** Do not use MightySat Rx if it is damaged until it has been inspected by an cleaning solution other than those recommended in the Cleaning, Disinfecting, and Service section of this manual. Permanent damage to MightySat Rx may occur if other solutions are used to clean the device.
- **CAUTION:** Never submerge MightySat Rx in water or any other liquid solution this may cause permanent damage to the MightySat Rx.

Compliance Warnings and Cautions

- **WARNING:** Any changes or modifications not expressly approved by Masimo shall void the warranty for this equipment and could void the user's authority to operate the equipment.
- **CAUTION:** Comply with local laws in the disposal of the MightySat Rx, including batteries.
- **Note:** When using MightySat Rx with a device with wireless features, consideration should be taken to local requirements for the operation of wireless features and to prevent unacceptable interference to the operation of other wireless devices.
- **Note:** In accordance with international telecommunication requirements, the frequency band of 2.4 GHz is only for indoor usage to reduce potential for harmful interference in co-channel mobile satellite systems.
- **Note:** This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
- **Note:** This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
  - Reorient or relocate the receiving antenna.
  - Increase the separation between the equipment and receiver.
  - Consult the dealer or an experienced radio/TV technician for help.
- **Note:** This equipment has been tested and found to comply with the Class B limits for medical devices according to the IEC 60601-1-2: 2007, Medical Electrical Equipment Part 1-2: 2007. These limits are designed to provide reasonable protection against harmful interference in all establishments, including domestic establishments.
- **Note:** This Class B digital apparatus complies with Canadian ICES-003.

TECHNOLOGY OVERVIEW

The following chapter contains general descriptions about parameters, measurements, and the technology used by Masimo products.

Signal Extraction Technology® (SET®)

Masimo Signal Extraction Technology® (SET®) measuring differs from that of conventional pulse oximeters. Conventional pulse oximeters assume that arterial blood is the only blood moving (pulsating) in the measurement site. During patient motion, this assumption is frequently violated because venous blood moves similarly to arterial blood. As a result, motion causes conventional technologies to underread and venous blood overread readings. This is commonly referred to as motion.

Masimo SET® pulse oximetry utilizes parallel engines and adaptive filtering. Adaptive filters are powerful because they are able to adapt to the varying physiology signals and to measure and separate them by looking at the whole signal and breaking it down to its fundamental components. The Masimo SET® signal processing algorithm, Discrete Saturation Transform® (DST®), is applied to the Saturation Transform® (ST®), reliably identifies the noise, isolates it and, using adaptive filters, cancels it. It then reports the true arterial oxygen saturation for display on the monitor.

Masimo SET DST

This figure is for conceptual purposes only.

General Description for Oxygen Saturation (SpO2)

Pulse oximetry is governed by the following principles:

- Oxyhemoglobin (oxygenated blood) and deoxyhemoglobin (non-oxygenated blood) differ in their absorption of red and infrared (IR) wavelengths of light.
- The amount of arterial blood in tissue changes with pulse pulse (photoplethysmography). Therefore, the amount of light absorbed by the varying quantities of arterial blood changes in real time.

Theoretical Maximum Sensitivity for SpO2, PR and PI

Stability of the SpO2 readings may be a good indicator of signal validity. Although stability is a relative term, experience will provide a good feeling for changes that are artifactual or physiological and the speed, timing, and behavior of such.

The stability of the SpO2 readings is affected by the averaging time setting used. The longer the averaging time, the more stable the readings tend to become. This is due to a damping mechanism in the signal is averaged over a longer period of time. Slow damping minimizes inaccurate movement, longer averaging times delay the response of the sustained and reduce the measured variations of SpO2 and pulse rate.

Theoretical Oxygen Saturation vs. SpO2(t)

The MightySat Rx is calibrated to measure and display functional oxygen saturation (SpO2): the amount of oxyhemoglobin expressed as a percentage of the hemoglobin that can carry oxygen.

Note that dyshemoglobins are not capable of transporting oxygen, but are recognized as oxygenated hemoglobins by conventional pulse oximeters.

General Description for Perfusion Index (PI)

The Perfusion Index (PI) is the ratio of the pulsatile blood flow to the non-pulsatile or static blood in peripheral tissue. PI thus represents a noninvasive measure of peripheral perfusion that can be and noninvasively obtained from a pulse oximeter.

General Description for Pulse Rate (PR)

Pulse rate (PR), measured in beats per minute (BPM) is based on the optical detection of peripheral flow pulse.

General Description for Pleth Variability Index (PVI®)

The Pleth Variability Index (PVI®) is a measure of the dynamic changes in the perfusion index (PI) that occur during the respiratory cycle. The calculation is accomplished by measuring changes in PI over a time interval where one or more complete respiratory cycles have occurred. PVI is displayed as a percentage (0-100%).

PVI® is intended to aid in the prediction of the likelihood of a patient's response to vascular tone, circulating blood volume, and vasodilation by pharmacologic interventions.

The utility of PVI has been evaluated in clinical studies [1-11]. Technical and clinical factors that may affect PVI include pleth modulation, pulse rate, pleth variability, signal strength, perfusion, probe placement, probe site, arrhythmias, poincarium, use of vasopressors or vasodilators, low perfusion index, subject age, arrhythmias, left or right heart failure, and tidal volume [12-14].

PRODUCT SUPPORT

For additional help, contact Masimo Technical Services at (949) 297-7000. Local contact information can be found at: http://www.masimo.com/contact.htm.

If you encounter any serious incident with product, please notify the competent authority in your country and the manufacturer.

LIMITED WARRANTY

Masimo warrants to the original end-user purchaser the Masimo-branded hardware product MightySat® Rx Fingertip Pulse Oximeter (the "Product") will be free from defects in workmanship and materials for a period of one (1) year from the date of purchase when used in accordance with Masimo's user manuals, technical specifications, and other Masimo published guidelines (the "Limited Warranty"). Masimo will repair or replace the Product with a new or refurbished unit.

Masimo's sole obligation under this warranty is the repair or replacement, at its options, of any defective Product or component thereof during the warranty period.

To request repair or replacement, please contact Masimo and obtain a return authorization number. Please provide the number to that Masimo can track the Product. If Masimo determines that a Product must be replaced under warranty, it will be replaced at Masimo's expense. Repaired units will be returned. All other shipping costs are the responsibility of the customer.

The above described warranty is in addition to any statutory rights provided to Purchaser under applicable laws and regulations. Purchaser's sole and exclusive remedy for any breach of warranty will be as stated in the above rights cannot be disclaimed and are superseded by the above described warranty to the extent permitted under applicable laws and regulations of the region in which the product is sold.

EXCLUSIONS

The warranty does not apply to any non-Masimo branded product or any software, even if packaged with the Product, or any Product that was: (a) not new or in its original packaging when supplied to purchaser; (b) modified without Masimo's written consent; (c) damaged by accident, abuse, misuse, neglect, alteration, impact, or power surge; (d) damaged by anyone other than a person authorized by Masimo; (e) used with other products, like new sensors, unprocessed sensors, or other accessories, not branded by Masimo; (f) used with a Product that is not sold with the Product; (f) not used or applied in accordance with Masimo's manual or as otherwise provided in its labelling; (g) reprocessed, reconditioned, or recycled; and (h) damaged by accident, abuse, misuse, neglect, alteration, impact, or power surge.

No warranty applies to any Product provided to Purchaser for which Masimo, or its authorized distributor, is not paid and Masimo reserves the right to withhold warranty service.

LIMITATION OF WARRANTY

Except as expressly set forth herein, and to the extent by the purchase agreement, the above warranty is the exclusive warranty that applies to the Product and software media, and Masimo does not make any other promises, guarantees, or warranties regarding the Product or software media. In other warranty applies, express or implied without limitation, any implied warranty of merchantability, fitness for a particular purpose, satisfactory quality, or non-infringement. Masimo does not warrant that the Product will meet Purchaser's requirements or that its operation will be uninterrupted or error-free. To the extent that any warranty is required by law to be implied and cannot be disclaimed, but can be limited, such warranty is limited to the duration and terms of this Limited Warranty.

Masimo and its suppliers are not liable for the licensing terms for the terms and conditions that apply to and Software Media, including without limitation any implied warranty of merchantability, fitness for a particular purpose, satisfactory quality, or non-infringement. Masimo and its suppliers are not liable for any incidental, indirect, special, consequential, damage, or expense arising from the use or loss of use of any Products or Software. In no event shall Masimo's liability arising from any Product or software exceed the amount that Purchaser paid for such Product or software. Masimo and its suppliers are not liable for the Product or Software. The above limitations do not pertain our liability that cannot legally be disclaimed by contract.

SALES & END-USER LICENSE AGREEMENT

This document is a legal agreement between you ("purchaser") and Masimo Corporation ("Masimo") for the purchase of MightySat® Rx Fingertip Pulse Oximeter (the "Product"). The Product is embedded Software ("Software") in your purchase and you agreed is a separate contract for the acquisition of this Product, the following terms are the entire agreement between the parties regarding your purchase of this Product. If you do not agree to the terms of this agreement, promptly return the entire Product, including all accessories, in their original packages, with your sales receipt to Masimo for a full refund.

RESTRICTIONS

1. Copyright Restrictions. The Software and the accompanying written materials are copyrighted. Unauthorized copying of the Software, including Software that has been modified, merged, or included with other software, or the written materials is expressly forbidden. Purchaser may be held legally responsible for any copyright infringement that is caused or allowed by Purchaser's failure to abide by the terms of this Agreement. Nothing in this License provides any rights beyond those provided by 17 U.S.C. §117.
2. Use Restrictions. Purchaser may purchase and Product transfer the Product term but location to another provided that the Software is not copied. Purchaser may not provide Product's material transfer the Software from the Product to any third party for any reason without the express written approval of Masimo. Purchaser may not modify, adapt, or translate, reverse engineer, decompile, disassemble, or create derivative works based on the Software or the written materials.
3. Transfer Restrictions. In no event may Purchaser transfer, assign, rent, lease, sell, or otherwise dispose of the Product or the Software on a temporary basis. Purchaser shall not assign or transfer this License, in whole or in part, to anyone without the express written consent of Masimo, which consent may be withheld in its sole discretion. If purchaser's rights hereunder shall transfer automatically to any party that legally acquires title to the Product with which this Software is included. Any attempt to assign any rights, duties or obligations which arise hereunder without that as set forth in this paragraph shall be void.
4. U.S. Government Rights. If Purchaser is acquiring Software (including the related documentation) on behalf of any part of the United States Government, the following provisions apply: the Software and documentation are deemed to be "commercial software" and "commercial computer software documentation," respectively pursuant to DFAR Section 227.7202-FAR 12.212, as applicable. Any use, modification, reproduction, release, performance, display or disclosure of the Software (including the related documentation) by the U.S. Government shall be governed solely by the terms of this Agreement and shall be prohibited except to the extent expressly permitted by the terms of this Agreement.

SPECIFICATIONS

Performance Specifications

FUNCTIONAL OXYGEN SATURATION (SpO2) ACCURACY	
Condition	**Range**
No Motion (1)	70% to 100%
Motion (2)	70% to 100%
Low perfusion (3)	70% to 100%
Per the SpO2 Performance Specifications and the additional SpO2 accuracy information.	

PULSE RATE (PR)	
Condition	**Range**
No Motion (4)	25 bpm to 240 bpm
Motion (4)	25 bpm to 240 bpm
Low perfusion (4)	25 bpm to 240 bpm

RESPIRATION RATE (RRp)	
Condition	**Range**
No Motion (5)	4 rpm to 70 rpm

* Refer accuracy is a statistical calculation of the difference between device measurements and reference measurements. Statistically about two-thirds of the device measurements fall within +/- Axxx of the reference measurements in a controlled study.

Display Ranges

DISPLAY RANGES	
PARAMETER	**RANGE**
SpO2 (Oxygen Saturation)	0% to 100%
PR (Pulse Rate)	25 bpm to 240 bpm
PI (Perfusion Index)	0.02% to 20%
PVI® (Pleth Variability Index)	0 to 100%
RRp (Respiration Rate)	4 rpm to 70 rpm
The emitted wavelength(s) range from 600 to 1000 nm and the peak optical power is less than 15 mW. Information about the wavelength range can be especially useful to biologists.	

Resolution

RESOLUTION	
PARAMETER	**RESOLUTION**
%SpO2	1%
Pulse Rate	1 bpm
Respiration Rate	1 rpm

SpO2 Performance Specifications

The Bland-Altman plot represents the correlation of the Bland-Altman Square values measured using the MightySat Rx with Masimo SET® Saturation Technology to a clinical study under no-motion conditions.

The below Bland-Altman plot represents the correlation of the (SpO2 – SaO2) versus (SpO2 + SaO2) under no-motion with an upper 95% and lower 95% limits of agreement.

Connecting to a Smart Device via Bluetooth (LE)

Note: Bluetooth LE is an optional feature available on specific versions of MightySat Rx for use with compatible smart devices. Not all models may be available in your region.

Bluetooth Connection Overview

The MightySat Rx provides a Bluetooth LE wireless option to allow connection to a compatible smart device. The Bluetooth communication is only available for specific versions of MightySat Rx. Once paired, the MightySat Rx and device connection is established the Bluetooth connected icon will appear. MightySat Rx can only communicate to a single smart device at one time to minimize the risk of unauthorized access.

1. Turn on Bluetooth on MightySat Rx. See Navigating the Menu of this manual for further instructions.
2. Ensure the Bluetooth is enabled on the device.
3. From your compatible smart device, do one of the following:
   - For Apple® devices, open the Settings app and tap "Bluetooth®."
   - For Android™ devices, open the Settings app and tap "Bluetooth."
4. Search and download the "Masimo Professional Health" app.
5. Launch the Masimo Professional Health app and follow the in-app instructions to pair the device.

Note: The MightySat Rx requires the use of the Masimo Professional Health app to communicate to a compatible smart device.

Confirm the correct connection by reviewing the appropriate "serial" number is displayed on the smart device. The serial number can be found on the About screen, see Navigating the Menu of this manual for instructions on accessing the About screen.

Once MightySat Rx is connected to a smart device, confirm the readings on the MightySat Rx to the readings displayed on the Masimo Professional Health app are synchronized without a delay greater than 10 seconds.

If the Bluetooth connection is lost, an alarm will appear on the MightySat Rx after the device has been established.

Note: If the delay is greater than 10 seconds, move the MightySat Rx in closer proximity to the smart device or attempt to repeat the connection process.

Note: To prevent unauthorized connection to the MightySat Rx, turn off the optional Bluetooth LE feature on the MightySat Rx.

CAUTION: When using MightySat Rx (optional Bluetooth version) with a smart device, keep both devices within the recommended range of each other (see Specifications for details); moving outside of this range may cause a loss in connection with the smart device.

CAUTION: When using MightySat Rx (optional Bluetooth version) with a smart device, relocate the devices away from sources that may interfere with the Bluetooth connection. Interference may result in loss of Bluetooth of Service (see Specifications for details) of the Bluetooth connection.

CLEANING, DISINFECTING, AND SERVICE

Cleaning and Disinfecting MightySat Rx

WARNING: Before cleaning, read **Cleaning, Disinfecting, and Service Warnings and Cautions** section in this manual.

WARNING: Before cleaning, make sure the device is off and is not applied to a finger.

CAUTION: Thoroughly clean the MightySat Rx before applying it to a new patient or patient.

Note: Before cleaning, remove the batteries and make sure the battery cover is re-attached correctly.

To Clean the MightySat Rx, Use the Following Procedure:

- Wipe each of the sensor pads and outer surfaces using a cleaning wipe™ wipe twice or until the surfaces are free of any visible residue.
- **Note:** Pay particular attention to cracks, crevices, and hard to reach areas of the device.
- Repeat the above cleaning step using a fresh wipe.
- Allow the MightySat Rx to dry thoroughly before using again.

Battery Life

ITEM	DESCRIPTION
Operating	1.1 Volt AAA Battery (2)
Battery Life	* Approximately 1800 spot checks
Note: Based upon 15 hours of operation with screen brightness set to 50% a spot check of 35 seconds.	

Physical Characteristics

DESCRIPTION	
Dimensions	2.9" x 1.6" x 1.2" (7.4 cm x 4.1 cm x 3.0 cm)
Weight without Battery	3.1 Oz. (0.2 g)
Weight with Battery*	0.16 lbs. (73g)
* Weight is dependent on batteries used.	

Bluetooth LE Wireless Technology Information

BLUETOOTH LE WIRELESS TECHNOLOGY INFORMATION	
Modulation Type	**GFSK**
Max. Output Power	< 1 dBm
Frequency Range	2402 MHz – 2480 MHz
Antenna Peak Gain	-2 dBi
Receiver Sensitivity	-92 level – (+4 meters) line-of-sight
Quality of Service (QoS)	Delay: <10 seconds
Security	Proprietary binary protocol

RECOMMENDED SEPARATION DISTANCES

RECOMMENDED SEPARATION DISTANCE BETWEEN PORTABLE AND MOBILE RF COMMUNICATIONS EQUIPMENT AND MightySat Rx

The ME Equipment is intended for use in an electromagnetic environment in which radiated RF disturbances are controlled. The customer or the user of the ME Equipment can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the ME Equipment as recommended below, according to the maximum output power of the communications equipment.

RATED MAXIMUM OUTPUT POWER OF TRANSMITTER (W)	SEPARATION DISTANCE ACCORDING TO FREQUENCY OF TRANSMITTER (m)		
	150 kHz TO 80 MHz $d = 1.2\sqrt{P}$	80 MHz TO 800 MHz $d = 1.2\sqrt{P}$	800 MHz TO 2.5 GHz $d = 2.3\sqrt{P}$
0.01	0.12	0.018	0.035
0.1	0.37	0.057	0.11
1	1.2	0.18	0.35
10	3.7	0.57	1.1
100	11.7	1.8	3.5

For transmitters rated at a maximum output power not listed above, the recommended separation distance d in meters (m) can be estimated using the equation applicable to the frequency of the transmitter, where P is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

Note 1 At 80 MHz and 800 MHz, the higher frequency range applies.

Note 2 These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.

** Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) telephones and land mobile radios, amateur radio, AM and FM radio broadcast and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength at the location in which the ME Equipment is used exceeds the applicable RF compliance level above, the ME Equipment should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as reorienting or relocating the ME Equipment.*

*** Over the frequency range 150 kHz to 80 MHz, field strengths should be less than [V1] V/m.*

BEDIENUNGSANLEITUNG

Nicht für den Verkauf in den USA, sondern nur für den Export bestimmt.

Diese Anweisungen sollten vor Inbetriebnahme des Geräts sorgfältig durchgelesen werden. Die Sicherheitshinweise beinhalten wichtige Informationen zur Handhabung. Es ist möglich, dass nicht alle in diesem Handbuch enthaltenen Informationen für Ihr Gerätemodell relevant sind. Allgemeine Informationen und Illustrationen sind zur Verständnis des Werkstoffs und Veranschaulichung des Handbuches und Abgleichs mit dem Gerät bestimmt. Die Illustrationen können sich geringfügig von Ihrem Gerät unterscheiden. Das MightySat Rx darf nur verwendet werden, wenn diese Anleitung ganz vollständig gelesen und verstanden wurde.

Warnung: Das Gerät darf nicht in der Nähe von brennbaren oder explosiven Gasen verwendet werden, das Gerät ist nicht für eine Verwendung in explosionsgefährdeten Bereichen geeignet.

Vorsicht: Das Gerät darf nicht in der Nähe von starken Strahlungsquellen wie Mikrowellenherden oder Röntgengeräten verwendet werden, da dies die Messergebnisse verfälschen kann.

Hinweis: Das Gerät ist nicht für den Einsatz durch Kinder vorgesehen.

ZU DIESER ANLEITUNG

Das MightySat Rx Finger-Pulsoximeter sollte nicht verwendet werden, ohne dass diese Anleitung vollständig gelesen und verstanden wurde.

Verwenden Sie das MightySat Rx nicht genau in Übereinstimmung mit den Anweisungen in dieser Anleitung, auch hinsichtlich Auswahl der Applikationsstelle und Platzierung des Sensors, kann die Messung ungenau sein. Wenden Sie sich bei Fragen oder Problemen an Ihren Händler, Lieferanten oder Hersteller.

WARNUNG: Verwenden Sie das MightySat Rx nicht während mehrfacher Gegenstände, wie Ringen oder Nagellack, auch Nagelkunst, Acrylnägel oder andere Verlängerungen können die Messung beeinträchtigen.

WARNUNG: Verwenden Sie das MightySat Rx nicht während Sie sich bewegen, da dies zu ungenauen Messergebnissen führen kann.

WARNUNG: Verwenden Sie das MightySat Rx nicht während Sie Medikamente zu sich nehmen, die Ihren Herzschlag beeinflussen können
