A8811 ▶ **Sigma-Aldrich®**

Aldolase from rabbit muscle

★★★★★ (0)

ammonium sulfate suspension, 10-20 units/mg protein

Synonym(s):

D-Fructose-1,6-bisphosphate-D-glyceraldehyde-3-phosphate-lyase, Fructose-diphosphate Aldolase

CAS Number: **9024-52-6**

Enzyme Commission number: **4.1.2.13 (BRENDA, IUBMB)**

MDL number: **MFCD00130453**

NACRES: NA.54

PROPERTIES

biological source	rabbit muscle
Quality Level	200
form	ammonium sulfate suspension
specific activity	10-20 units/mg protein
foreign activity	glyceraldehyde-3-phosphate dehydrogenase $\leq 0.03\%$ lactic dehydrogenase $\leq 0.03\%$ phosphoglucose isomerase $\leq 0.6\%$

pyruvate kinase $\leq 0.1\%$
triosephosphate isomerase $\leq 0.05\%$

storage temp.	2-8°C

DESCRIPTION

General description

Aldolase exists as three isoforms in rabbit, which includes type A from muscle, type B from liver and brain associated type C. Aldolases correspond to a molecular weight of 158 kDa and exists as tetramer.

Application

Aldolase from rabbit muscle has been used:

- in standard 1-phosphofructokinase from rabbit muscle (RPFK-1) assay
- as a standard in the characterization of metabolic enzymes from glaucomatous tissues
- in fructose 2,6-bisphosphate assay of human cell lines

Aldolase is used to convert fructose 1,6-diphosphate to dihydroxyacetone phosphate and glyceraldehyde 3-phosphate. Aldolase, from rabbit muscle has been used for stereospecific deprotonation at DHAP C3.

Packaging

100, 200, 1000 units in poly bottle

5000 units in glass bottle

Biochem/physiol Actions

Aldolase interaction with Wiskott-Aldrich syndrome protein (WASP) may modulate actin dynamics. It reverses the inhibition elicited by ascorbate on Muscle-type LDH (LDH-m4).

Aldolase is involved in gluconeogenesis, the Calvin cycle and glycolysis. Aldolase, from rabbit muscle, is a class I aldolase which forms covalent Schiff base intermediates. The active site of aldolase is in the center of the α/β^8 barrel fold.

Unit Definition

One unit will convert 1.0 μ mole of fructose 1,6-diphosphate to dihydroxyacetone phosphate and glyceraldehyde 3-phosphate per min at pH 7.4 at 25 °C.

Physical form

Crystalline suspension in 2.5 M $(\text{NH}_4)_2\text{SO}_4$, 0.01 M Tris, pH 7.5, 0.001 M EDTA

Analysis Note

Protein determined by biuret.
