Control DNA

For Testing and Validation of
 0.75% Agarose Gel Cassettes
 collects targets between 1 kb - 10 kb

0.75%

Item# CON7504

For:

Pippin Prep™
 CSD7510 Gel Cassettes

Blue Pippin™
 BLF7510 Gel Cassettes

 sage science

What is Enclosed

Pippin cassettes and instruments are functionally tested using restriction digests of genomic DNA from *E. coli*. For each cassette type, a different restriction digest is used, chosen so that size distribution of the digested DNA closely matches the useful fractionation range of the cassette, without any significant peaks or discontinuities. Following restriction digestion, the control DNA is purified by phenol:chloroform extraction, dialyzed, and diluted into Pippin Prep electrophoresis buffer (without ethidium bromide). The DNA is premixed with Pippin loading solution and is provided ready for loading – no additional loading solution should be added. The DNA concentration is 5 micrograms per 40 microliters. 40 microliters of control DNA should be used per lane. Each tube contains sufficient volume for 16 sample loads.

Control DNA is useful to test, refine, and troubleshoot Pippin size fractionation protocols. It can also be used to check system performance.

To Use

1. Carefully follow sample load instructions outlined in the Operations Manual.
2. Pipette 40 μ l of Control DNA into a sample well

QC protocol for 0.75% agarose cassettes

Cassettes are tested using "Tight" mode atwith the following target values. Extracted samples are run an Agilent Bioanalyzer using a DNA 1000 chip. The analysis volume is 1 μ l from a 40 μ l elution volume (1:40 dilution).

| Tight | Range | Time | Peak | Ref | Off | BP Target | BP Start | BP End | BP Pause |
|-------|-------|------|------|-----|-----|-----------|----------|--------|----------|
| 5 | | | | | | 8000 | 5436 | 10564 | 0 |
| 4 | | | | | | 6000 | 4094 | 7906 | 0 |
| 3 | | | | | | 4000 | 2669 | 5331 | 0 |
| 2 | | | | | | 2000 | 1270 | 2730 | 0 |
| 1 | | | | | | 0 | 0 | 0 | 0 |

Typical Results

Users should expect to see significant signal from the control DNA in a profile illustrated below.

The following bioanalyzer results indicate typical results from QC testing.
