DESCRIPTION

Amino Acid Sequence

Glu-Cys-Gly-OEt

Application

Glutathione reduced ethyl ester has been used:

- to increase intracellular glutathione levels in mouse fibroblast L929 cells
- as a medium supplement in *Spodoptera frugiperda* (Sf)9 cells

[GET YOURS HERE](#)**Actions biochimiques/physiologiques**

Glutathione reduced ethyl ester (GSH-MEE) is a membrane/lipid permeable derivative of GSH that may be used to partially supplement the GSH supply within cells subjected to cysteine and/or GSH depletion. GSH-MEE is hydrolysed by intracellular esterases to release GSH, thereby increases the concentrations of intracellular GSH. It prevents the toxic effects of acetaminophen in animal cells. It protects human lymphoid cells and skin fibroblasts against the damage caused due to radiation.

Glutathione reduced ethyl ester inhibits melanin synthesis by inhibiting tyrosinase activity in Melan-A cells. Its antimelanogenic functionality has potential in treating hyperpigmentation skin disorders. GEE supplementation during islets isolation from pancreas reduces reactive oxygen species production and apoptosis.
