Amino Acid Sequence

γ -Glu-Cys-Gly

Application

L-Glutathione (GSH) reduced has been used in the elution buffer to elute GST (glutathione S-transferase)-fused proteins using glutathione-agarose beads. It has been used to prepare a standard curve for GSH analyses.

May be used at 5-10 mM to elute glutathione S-transferase (GST) from glutathione agarose.

Conditionnement

10 mg in glass bottle

300 mg in poly bottle

1, 5, 10, 25, 50, 100, 250, 500 g in poly bottle

Actions biochimiques/physiologiques

Endogenous antioxidant that plays a major role in reducing reactive oxygen species formed during cellular metabolism and the respiratory burst. Glutathione-S-transferase catalyzes the formation of glutathione thioethers with xenobiotics, leukotrienes, and other molecules that have an electrophilic center. Glutathione also forms disulfide bonds with cysteine residues in proteins. Via these mechanisms, it can have the paradoxical effect of reducing the efficacy of anti-cancer agents.

Reduced L-glutathione (GSH) is a thiol compound and is associated with catabolism and transportation. Plasma GSH levels are associated with Parkinson's diseases, Alzheimer's, diabetes, macular degeneration, and HIV (human immunodeficiency virus) disease.

How do I get lot-specific information or a Certificate of Analysis?

The lot specific COA document can be found by entering the lot number above under the "Documents" section.

How do I find price and availability?

There are several ways to find pricing and availability for our products. Once you log onto our website, you will find the price and availability displayed on the product detail page. You can contact any of our Customer Sales and Service offices to receive a quote. USA customers: 1-800-325-3010 or view [local office numbers](#).

What is the Department of Transportation shipping information for this product?

Transportation information can be found in Section 14 of the product's (M)SDS. To access the shipping information for this material, use the link on the product detail page for the product.

How do I solubilize Product G4251, L-Glutathione reduced?

Reduced glutathione is freely soluble in water, dilute alcohol, liquid ammonia, and DMF.

What is the solution stability of Product G4251, L-Glutathione reduced?

Aqueous solutions readily oxidize in air to oxidized glutathione, GSSG. Half-lives of reduced glutathione in solution at various pHs and temperatures have been reported. The half-life of reduced glutathione is increased in the presence of a chelating agent. For supporting references, please consult the product information sheet (under Documents, above).

My question is not addressed here, how can I contact Technical Service for assistance?
